

# Small Construction Erosion Control Plan

## City of Kelso

The **Small Construction Erosion Control Plan** is an abbreviated plan for describing how a small construction site will be managed to prevent sediment and pollutants from leaving the site during construction. Sediment and pollutants from construction must be kept out of the City's drainage system, streets, streams, rivers, lakes, and wetlands.

The City-approved **Small Construction Erosion Control Plan** must be located at the construction site during construction and must be made available to a City inspector when requested. The property owner is responsible for implementing and maintaining the measures described in this plan. It is advisable to include the approved plan in the construction contract with the builder.

This plan template is intended for use by property owners and is not a substitute for Kelso Municipal Code. We have substituted some technical language contained in the code and engineering standards with plainer terms.

### ELIGIBLE PROJECTS:

The instructions in this plan template apply to new construction and additions/remodels that are eligible to use the **Abbreviated Stormwater Site Plan**.

### ELEMENTS OF ABBREVIATED STORMWATER SITE PLAN:

The **Small Construction Erosion Control Plan** is a required attachment to the **Abbreviated Stormwater Site Plan**. The plan consists of a narrative and drawing. Use the last page of this form (**Erosion Control Site Plan**) as a template for drawings.

Attach the completed plan (this form) and drawings to the **Abbreviated Stormwater Site Plan** and the Civil Permit application.

#### PROJECT SITE INFORMATION

Parcel #: 2408710

Address/Location: 2408 Talley Way, Kelso, WA 98626

#### APPLICANT/PROPERTY OWNER

Business Name: Ultimate Steel Erection

Contact Name: Codi Torres

Mailing/Billing Address: 2621 S Frontage Rd

City Rexburg

State ID

Zip 83440

Phone Number: 208-356-4239

Email: codi@ultimatesteelerrection.com

#### AUTHORIZED REPRESENTATIVE OR CONTRACTOR (If applicable)

Business Name: to be decided by owner

Contact Name:

Mailing/Billing Address:

City

State

Zip

Phone Number:

Email:

Expiration Date:

City of Kelso Business License #

Expiration Date:

#### PROPERTY OWNER OR AUTHORIZED AGENT

I hereby certify that I have read and examined this application and know the same to be true and correct, and I am authorized to apply for this permit.

Signature:

Printed Name:

Date:

**Erosion Control Inspector**

Designate an Erosion Control Inspector who has the skills to assess the site conditions and construction activities that could impact stormwater quality. The inspector must be on-site or on-call at all times. The applicant or construction contractor may act as the Erosion Control Inspector.

The person identified below will be on-site or on-call at all times.

**Inspector Name:** to be decided by owner

**Phone:** \_\_\_\_\_ **Alternate Phone:** \_\_\_\_\_

**Construction Schedule**

Determine the approximate start and end dates of construction.

Any clearing, grading, or construction from October 1 through April 30 shall only be permitted if shown to the satisfaction of the City that silt-laden runoff will be prevented from leaving the site through proper use of best management practices (BMPs).

**Start Date:** 12/12/2022 **End Date:** 12/31/2024

Describe any construction activities that will occur between October 1 and April 30:

Construction during better summer weather is preferred, but some construction work may occur between October 1 and April 30. Proper additional erosion control should be observed.

**SITE NARRATIVE:**

The site narrative describes the site and expected construction activities. The site narrative is contained in Section 1: Site and Project Description of the **Abbreviated Stormwater Site Plan**.

Section 1 of the **Abbreviated Stormwater Site Plan** is attached.

Calculate the project impacts.

	<b>Impact</b>	<b>Impact</b>
A	Total land disturbed	4,800 (sq. ft.)
B	Total volume of proposed cut and fill	0 (cu. ft.)

**EROSION CONTROL REQUIREMENTS:**

The applicant and contractor must prevent eroded soils from leaving the site during construction.

At least one BMP for each of the 13 requirements below must be selected, unless the element is not applicable.

To select the appropriate BMP, review the applicability and design requirements on the **Erosion Control Site Plan** template or in the Stormwater Management Manual for Western Washington (SWMMWW), Volume II (<https://ecology.wa.gov/Regulations-Permits/Guidance-technical-assistance/Stormwater-permittee-guidance-resources/Stormwater-manuals>).

This form includes the most common erosion control BMPs for small construction sites. The BMPs detailed on the **Erosion Control Site Plan** template are marked with . Refer to the SWMMWW for BMPs marked with a . Other approved BMPs from the SWMMWW may also be used.

Element #1: Preserve Vegetation and Mark Clearing Limits	
<i>Requirements</i>	<i>Select One or More BMPs</i>
Prior to clearing and construction, install highly visible fence to show the limits of construction activity and to protect vegetation and soils to be preserved. Use orange construction fence, chain link fence, or high visibility silt fence.	<input type="checkbox"/> C101 Preserving Natural Vegetation  <input type="checkbox"/> C103 High Visibility Fence  <input checked="" type="checkbox"/> C233 High Visibility Silt Fence – high visibility silt fence can act as both perimeter marking <i>and</i> sediment control (Element #4) (See WSDOT standard detail I-30.17-00) 
Show selected BMPs on the Erosion Control Site Plan.	

Element #2: Construction Access	
<i>Requirements</i>	<i>Use the Following BMP</i>
<p>Keep the street outside of the construction site clean by establishing and monitoring a single construction entrance. Restrict all traffic into the site to one entrance.</p> <p>If an existing driveway will be used, sweep and pick up dirt and debris from the driveway at the end of construction each day. Do not sweep into the street or drainage system.</p> <p>For sites without an existing driveway, use a gravel construction entrance.</p>	<input type="checkbox"/> C105 Stabilized Construction Entrance/Exit  <input checked="" type="checkbox"/> N/A (explain): No driveway disturbed, there is no location to put a construction access
Show the BMP on the Erosion Control Site Plan.	

Element #3: Control Flow Rates	
<i>Requirements</i>	<i>Choose One or More BMPs</i>
Protect slopes, ditches, properties, and waterways downstream of the construction site from erosion due to increases in volume and velocity of stormwater runoff from the site.	<input type="checkbox"/> C209 Outlet Protection  <input type="checkbox"/> C235 Wattles (See WSDOT standard detail I-30.30-02)  <input checked="" type="checkbox"/> N/A (explain): No additional flow proposed
Show selected BMPs on the Erosion Control Site Plan.	

Element #4: Sediment Control		
<i>Requirements</i>	<i>Select One or More BMPs</i>	
<p>Prior to leaving a construction site, runoff from disturbed areas must pass through a sediment removal device.</p> <p>Sediment barriers are used to slow stormwater and allow the sediment to settle out behind the barrier.</p> <p>Install/construct the sediment control BMP before site grading.</p>	<input checked="" type="checkbox"/> C103 High Visibility Silt Fence – high visibility silt fence can act as both perimeter marking <i>and</i> sediment control (Element #4) (See WSDOT standard detail I-30.17-00) <input type="checkbox"/> C235 Wattles (See WSDOT standard detail I-30.30-02) <input type="checkbox"/> N/A (explain):	  
Show the selected BMP(s) on the Erosion Control Site Plan.		

Element #5: Stabilize Soils		
<i>Requirements</i>	<i>Select One or More BMPs</i>	
<p>Soils without grass or other vegetation can easily erode. Exposed soils must be protected from rain and flowing water. Soils are protected by covering them with various materials, such as grass/sod, tarp, compost, or mulch.</p> <p>Check one or both options below:</p> <p><input type="checkbox"/> Construction will take place during the dry season (May 1 to September 30). No soils shall remain exposed and unworked for more than 7 days.</p> <p><input type="checkbox"/> Construction will take place during the wet season (October 1 through April 30). No soils shall remain exposed and unworked for more than 2 days.</p>	<input type="checkbox"/> C121 Mulching <input type="checkbox"/> C123 Plastic Covering/Tarp Covering <input checked="" type="checkbox"/> N/A (explain): No additional flow proposed	 
Show the selected BMP(s) on the Erosion Control Site Plan.		

Element #6: Protect Slopes		
<i>Requirements</i>	<i>Use the Following BMP</i>	
<p>Design and construct cut and fill slopes in a way that minimizes the potential for erosion.</p>	<input type="checkbox"/> C121 Mulching <input checked="" type="checkbox"/> N/A (explain): No steep slopes on site	
Show the selected BMP(s) on the Erosion Control Site Plan.		

 Refer to the SWMMWW     Refer to the Erosion Control Site Plan template

Refer to the Kelso Engineering Design Manual, online at [www.kelso.gov/engineering/engineering-documents](http://www.kelso.gov/engineering/engineering-documents), for more information or clarification of stormwater requirements within Kelso. You may also contact the City of Kelso’s Engineering Department at (360) 423-6590 or at [engineering@kelso.gov](mailto:engineering@kelso.gov).

Element #7: Protect Drain Inlets		
<i>Requirements</i>	<i>Use the Following BMP</i>	
Protect all storm drain inlets and catch basins in the road near the site during construction. Prevent runoff from the site from entering the inlets without first being filtered to remove sediment.  Install catch basin protection on all catch basins within 500 feet downstream of the project.	<input checked="" type="checkbox"/> C220 Storm Drain Inlet Protection (See WSDOT standard detail I-40.20-00) <input type="checkbox"/> N/A (explain):	
Show the selected BMP(s) on the Erosion Control Site Plan.		

Element #8: Stabilize Channels and Outlets		
<i>Requirements</i>	<i>Select One or More BMPs</i>	
Stabilize all temporary and permanent conveyance channels and their outlets. If a ditch or pipe from the site discharges to a ditch in the street or to a stream, outlet protection must be used.	<input type="checkbox"/> C207 Check Dams (See WSDOT standard detail I-50.20-01) <input type="checkbox"/> C209 Outlet Protection <input checked="" type="checkbox"/> N/A (explain): No additional channels or outlets proposed	  
Show the selected BMP(s) on the Erosion Control Site Plan.		

Element #9: Control Pollutants		
<i>Requirements</i>	<i>Select One or More BMPs</i>	
Handle and dispose of all pollutants, including demolition debris and other solid wastes, to keep them out of rain and flowing water.  Provide cover and containment for all chemicals, liquid products (including paint), petroleum products, and other materials. Apply fertilizers and pesticides following manufacturers' instructions for application rates and procedures. Handle all concrete and concrete waste appropriately.	<input checked="" type="checkbox"/> C151 Concrete Handling <input checked="" type="checkbox"/> C152 Sawcutting and Surface Pollution Prevention <input checked="" type="checkbox"/> C153 Materials Delivery, Storage, and Containment <input type="checkbox"/> N/A (explain):	  
Show location(s) of materials delivery, storage, and handling areas on Erosion Control Site Plan.		

Element #10 – Control Dewatering		
<i>Requirements</i>	<i>BMPs</i>	
Many small sites will not require dewatering.	If dewatering is needed consult the SWMMWW Vol. II, Ch. II, Section 3.3 and list the selected BMPs below:  No dewatering proposed	
Show location(s) of selected BMP(s) on the Erosion Control Site Plan.		

 Refer to the SWMMWW     Refer to the Erosion Control Site Plan template

Refer to the Kelso Engineering Design Manual, online at [www.kelso.gov/engineering/engineering-documents](http://www.kelso.gov/engineering/engineering-documents), for more information or clarification of stormwater requirements within Kelso. You may also contact the City of Kelso's Engineering Department at (360) 423-6590 or at [engineering@kelso.gov](mailto:engineering@kelso.gov).

<b>Element #11: Maintain BMPs</b>		
<i>Requirements</i>	<i>Select One or More BMPs</i>	
<p>Maintain and repair BMPs as needed. The designated Erosion Control Inspector (see page 2) should inspect all BMPs at least weekly and after every storm event. Keep an inspection log on site and available for review by the City inspector at all times.</p> <p>Remove all temporary erosion and sediment control BMPs within 30 days after final site stabilization or if the BMP is no longer needed. Any trapped sediment should be removed or stabilized on the site. No sediment shall be discharged into the street storm drainage system or streams, lakes, rivers, or wetlands.</p> <p>Keep a small supply of materials on hand, such as an extra tarp or plastic covering, filled sandbags, wattles, and any materials needed to repair or stabilize any of the BMPs selected for the project.</p>	<input type="checkbox"/> C150 Materials On Hand <input checked="" type="checkbox"/> C160 Certified Erosion and Sediment Control Lead	
<b>Element #12: Manage the Project</b>		
<i>Requirements</i>	<i>Select One or More BMPs</i>	
<p>Coordinate all work before initial construction with subcontractors and other utilities to ensure no areas are prematurely worked. The Erosion Control and Pollution Prevention measures must be installed in the order described in the Scheduling of BMP Installation section, below.</p>	<input type="checkbox"/> C150 Materials On Hand <input checked="" type="checkbox"/> C160 Certified Erosion and Sediment Control Lead <input type="checkbox"/> C162 Scheduling (see page 7)	
<b>Element #13: Protect Low Impact Development BMPs</b>		
<i>Requirements</i>	<i>Select One or More BMPs</i>	
<p>Protect LID BMPs from compaction, erosion, and sedimentation during construction. LID BMPs include Rain Garden, Dispersion (all kinds), Roof Downspout Full Infiltration, Permeable Pavement, and Perforated Stub-out Connections.</p>	<input type="checkbox"/> C103 High Visibility Fence <input type="checkbox"/> C207 Check Dams (See WSDOT standard detail I-50.20-01) <input checked="" type="checkbox"/> C233 Silt Fence (See WSDOT standard detail I-30.15-02) <input type="checkbox"/> N/A (explain):	  
<p>Show location(s) of selected BMP(s) on the Erosion Control Site Plan.</p>		

 Refer to the SWMMWW     Refer to the Erosion Control Site Plan template

Refer to the Kelso Engineering Design Manual, online at [www.kelso.gov/engineering/engineering-documents](http://www.kelso.gov/engineering/engineering-documents), for more information or clarification of stormwater requirements within Kelso. You may also contact the City of Kelso’s Engineering Department at (360) 423-6590 or at [engineering@kelso.gov](mailto:engineering@kelso.gov).

**Scheduling of BMP Installation**

*Prior to Clearing and Construction*

- 1. Mark clearing limits (Element #1)
- 2. Install or designate stabilized construction entrance (Element #2)
- 3. Install protection for drainage systems and sediment control (Elements #3, #4, and #7)
- 4. Designate staging areas for storage and handling of materials (Element #9)

*With Land Disturbance, As Areas are Disturbed*

- 5. Install sediment control
- 6. Stabilize unworked soils
- 7. Protect slopes and channels
- 8. Maintain BMPs

*After Construction*

- 9. Continue to maintain BMPs until the site is stabilized with vegetation
- 10. Remove BMPs within 30 days after site stabilization

**EROSION CONTROL SITE PLAN:**

The **Erosion Control Site Plan** is a drawing which shows the location of the proposed BMPs.

Submit the **Erosion Control Site Plan** on the provided template or on 8½ x 11 or 11 x 17 paper. The site plan may be either drawn by hand or drafted electronically.

The **Erosion Control Site Plan** must show the location of improvements, grading, filling, and erosion control BMPs. Show the following listed items on the site plan.

<b>Applicant Use</b>	<b>Required Elements</b>	<b>City Use</b>
<input type="checkbox"/>	Site address and/or parcel number	<input type="checkbox"/>
<input type="checkbox"/>	North arrow	<input type="checkbox"/>
<input type="checkbox"/>	Legend (if symbols are used)	<input type="checkbox"/>
<input type="checkbox"/>	Property boundary and dimensions	<input type="checkbox"/>
<input type="checkbox"/>	Adjoining street names	<input type="checkbox"/>
<input type="checkbox"/>	Location of highest and lowest elevations and arrows indicating slope (from high to low ground)	<input type="checkbox"/>
<input type="checkbox"/>	Areas that are to be cleared and/or graded	<input type="checkbox"/>
<input type="checkbox"/>	Cut and fill slopes, indicating top and bottom	<input type="checkbox"/>
<input type="checkbox"/>	Locations where upstream water enters the site	<input type="checkbox"/>
<input type="checkbox"/>	Existing surface water flow direction(s)	<input type="checkbox"/>
<input type="checkbox"/>	Location and direction of flow in all ditches, swales, pipes	<input type="checkbox"/>
<input type="checkbox"/>	Identify and locate all areas to be protected or preserved (vegetation protection, LID protection)	<input type="checkbox"/>
<input type="checkbox"/>	Identify and locate all BMPs described in the Erosion Control Plan	<input type="checkbox"/>
<input type="checkbox"/>	Post-construction soil amendment, if required	<input type="checkbox"/>

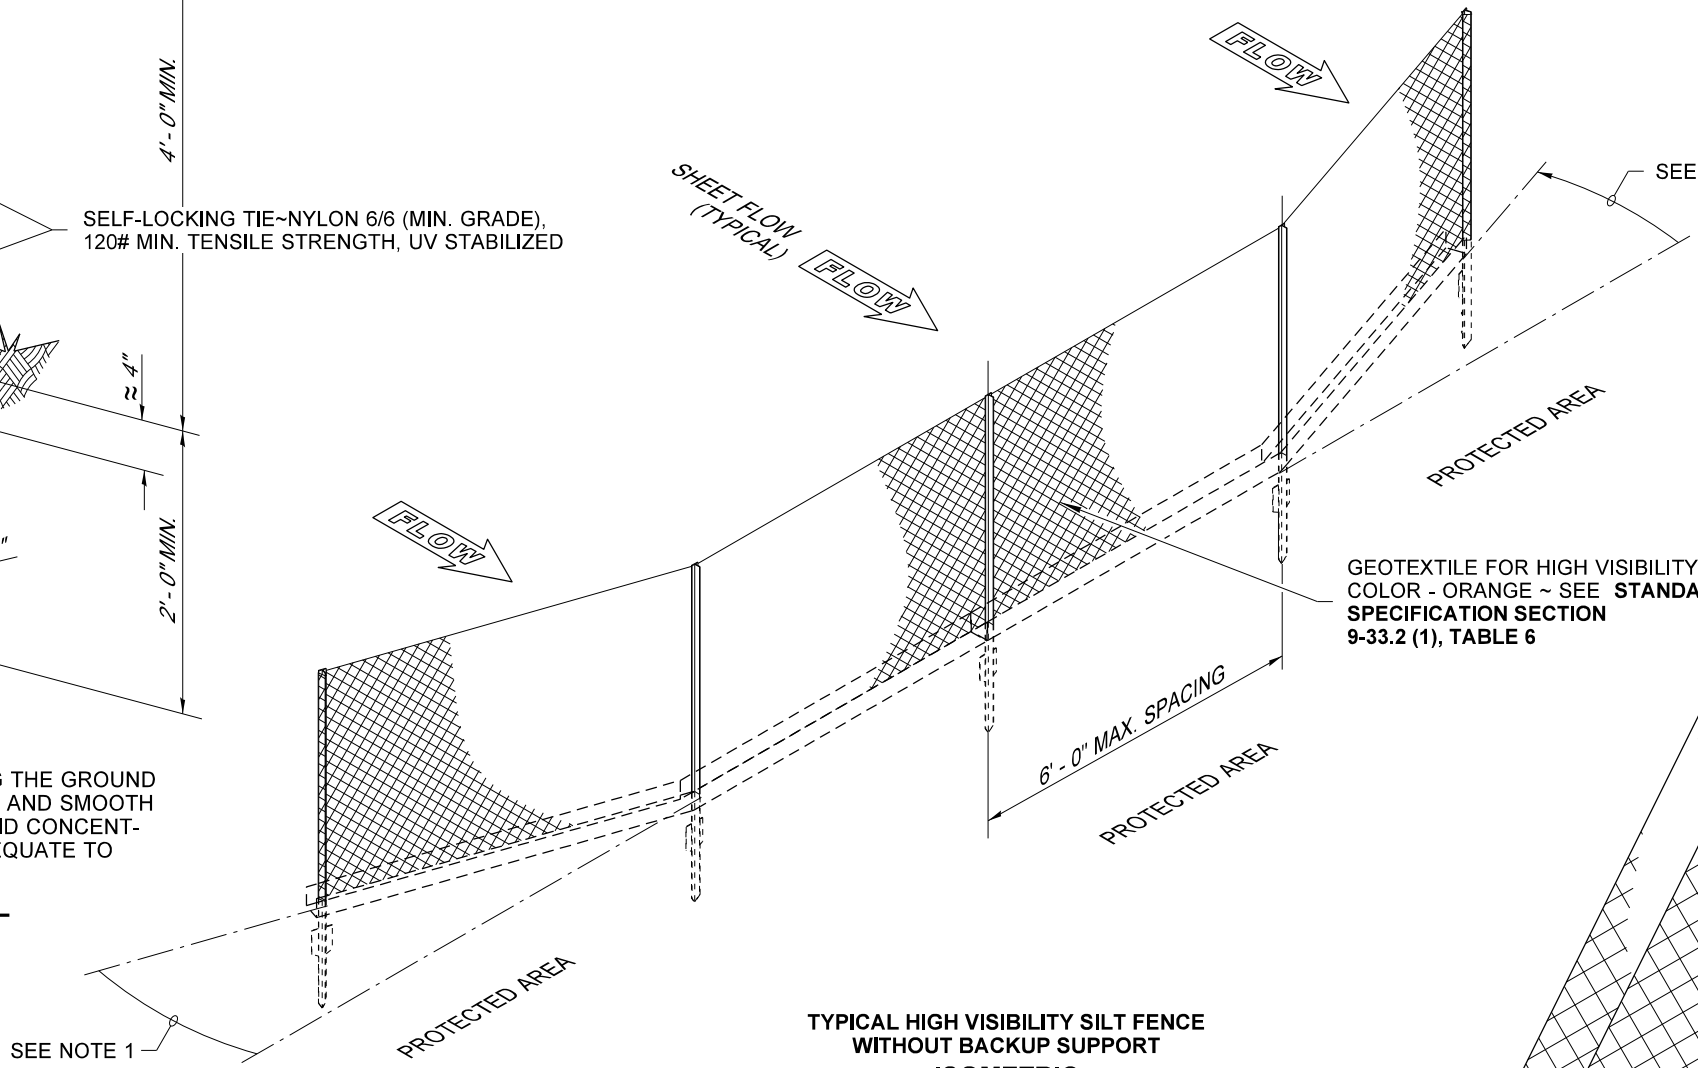

DRAWN BY: BILL BERENS

POST ~ SEE STANDARD SPECIFICATION, SECTION 8-01.3(9)A

**NOTE**  
 DURING EXCAVATION, MINIMIZE DISTURBING THE GROUND AROUND TRENCH AS MUCH AS IS FEASIBLE, AND SMOOTH SURFACE FOLLOWING EXCAVATION TO AVOID CONCENTRATING FLOWS. COMPACTION MUST BE ADEQUATE TO PREVENT UNDERCUTTING FLOWS.

**TYPICAL INSTALLATION DETAIL**  
 (STEEL POSTS SHOWN)

**TYPICAL HIGH VISIBILITY SILT FENCE WITHOUT BACKUP SUPPORT ISOMETRIC**  
 (STEEL POSTS SHOWN)

SPLICED FENCE SECTIONS SHALL BE CLOSE ENOUGH TOGETHER TO PREVENT SILT LADEN WATER FROM ESCAPING THROUGH THE FENCE AT THE OVERLAP. JOINING SECTIONS SHALL NOT BE PLACED IN LOW SPOTS OR IN SUMP LOCATIONS.

**SPLICE DETAIL**  
 (WOOD POSTS SHOWN)

**NOTES**

1. Angle Terminal end uphill 24" (in) to 48" (in) to prevent flow around fence (Typical).
2. Perform maintenance in accordance with **Standard Specification, Sections 8-01.3(9)A and 8-01.3(15)**.
3. Splices shall never be placed in low spots or sump locations. If splices are located in low or sump areas, the fence may need to be reinstalled unless the Project Engineer approves the installation.
4. Install silt fencing parallel to mapped contour lines.

**HIGH VISIBILITY SILT FENCE**

**WATTLE INSTALLATION ON SLOPES**

**NOTES**

1. Wattles shall be in accordance with **Standard Specification, Section 9-14.5(5)**. Install Wattles along contours. Installation shall be in accordance with **Standard Specification, Section 8-01.3(10)**.
2. Securely knot each end of Wattle. Overlap adjacent Wattle ends 12" (in) behind one another and securely tie together.
3. Compact excavated soil and trenches to prevent undercutting. Additional staking may be necessary to prevent undercutting.
4. Install Wattle perpendicular to flow along contours.
5. Wattles shall be inspected regularly, and immediately after a rainfall produces runoff, to ensure they remain thoroughly entrenched and in contact with the soil.
6. Perform maintenance in accordance with **Standard Specification, Section 8-01.3(15)**.
7. Refer to **Standard Specification, Section 8-01.3(16)** for removal.
